

Dear students,

Welcome to the R club !

The purpose of this club is to meet regularly for half a day and have an exchange on coding practices. This semester, the focus of our sessions will be on AI use for coding. Please take the time to fill this questionnaire and reflect on your AI usage.

R club questionnaire :

Name:

Position (Master student, PhD student, etc.):

- What kind of AI do you use in your studies? In general, how often do you use AI (daily, weekly, etc.)?

- Which tasks do you delegate to AI? For each task, please reflect on how often you do them using human skills vs. with AI.

- What potential risks do you think AI usage might cause (not risks for you personally, but in general)? Do you have other worries about the spread of AI in the workplace?

- Ideally, which tasks related to coding in R, would you like to use AI for? Which tasks would you never want to delegate to AI?

- Do you have a specific aspect of coding in R with AI that you would like to explore/know more about?

- Describe the steps you could take to make sure that your AI usage aligns with your goals in coding with R. You can use bullet points or redact your answer but do try to be as specific as you can.
